

In line with NAFS & RHS guidelines we are eliminating the use of non- biodegradable and non -recyclable floral foam in our shows starting with the Autumn Show 2024.

So what can you do instead? (Do more than one of these in combination if needed.)

Pin holders	These are reusable plates with closely spaced pins to hold flower stems in place.
Chicken wire	A cage or ball inside a container that stems are inserted into, but be careful not to cut yourself!
An old flower frog	These are glass inserts for vases with holes in.
Pebbles, sand, gravel & marbles	Used in a container to about a 1/3 depth that you can then push your stems into.
Shredded wood	Sometimes called wood aspen or excelsior, this is a compostable material that is a tangle of fibres.
Pliable twigs	Twigs such as curly willow pushed inside a vase as a support for stems.

We hope you will support us in our intention to decrease our environmental footprint.
